About This Guide

This document takes ESP-LAUNCHER and ESP-WROOM-02 as examples to introduce how to use the ESP8266 SDK. The contents include preparations before compilation, SDK compilation and firmware download. The document is structured as follows.

<table>
<thead>
<tr>
<th>Chapter</th>
<th>Title</th>
<th>Content</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chapter 1</td>
<td>Overview</td>
<td>Introduction to the overall procedure of using the SDK, and familiarization with the HDK, FW and toolkit of the ESP8266.</td>
</tr>
<tr>
<td>Chapter 2</td>
<td>Preparing the Hardware</td>
<td>Hardware configuration and setup for programming, illustrated with two examples, ESP-LAUNCHER and ESP-WROOM-02.</td>
</tr>
<tr>
<td>Chapter 3</td>
<td>Preparing the Software</td>
<td>Presentation of the non-OS SDK and RTOS SDK. Information on the tools for compiling the SDK and downloading the firmware.</td>
</tr>
<tr>
<td>Chapter 4</td>
<td>Flash Maps</td>
<td>Addresses and layout specifications for downloading the firmware to flash memory. Explanation of the OTA and non-OTA firmware.</td>
</tr>
<tr>
<td>Chapter 5</td>
<td>Compiling the SDK</td>
<td>Introductions on how to compiling the SDK using the relevant tools.</td>
</tr>
<tr>
<td>Chapter 6</td>
<td>Downloading the Firmware</td>
<td>Introductions on how to download the firmware with download tools.</td>
</tr>
<tr>
<td>Appendix A</td>
<td>Configuring ISSI &amp; MXIC Flash QIO Mode</td>
<td>Introduction to ISSI &amp; MXIC Flash QIO mode.</td>
</tr>
<tr>
<td>Appendix B</td>
<td>Learning Resources</td>
<td>List of ESP8266-related must-read documents and must-have resources.</td>
</tr>
</tbody>
</table>

Release Notes

<table>
<thead>
<tr>
<th>Date</th>
<th>Version</th>
<th>Release notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>2016.04</td>
<td>V2.0</td>
<td>First release.</td>
</tr>
<tr>
<td>2016.07</td>
<td>V2.1</td>
<td>Added MXIC Flash QIO mode; Modified the default value of byte 112 to 0.</td>

<td>---------------------------------------------------</td>
</tr>
<tr>
<td>2017.05</td>
<td>V2.8</td>
<td>Update Chapter 4 for 8MB and 16MB flash support.</td>
</tr>
</tbody>
</table>
1. Overview

1.1. Procedure Overview

Figure 1-1 shows the overall procedure of the SDK compilation.

```
1.2. ESP8266 HDK

The ESP8266 HDK (Hardware Development Kit) includes the chip—ESP8266EX, the module—ESP-WROOM-02 and the development board—ESP-LAUNCHER. Users can download the pre-compiled firmware using ESP-WROOM-02 or ESP-LAUNCHER.

Notes:

- If users use other development boards or modules that integrate ESP8266EX, please use the development firmware provided by the corresponding manufacturers.
- If users would like to purchase ESP-WROOM-02 or ESP-LAUNCHER, please visit Espressif’s official online store at: https://espressif.taobao.com.
1.3. **ESP8266 SDK**

The ESP8266 Software Development Kit (SDK) is an Internet of Things (IoT) application development platform developed by Espressif for developers. It includes such examples of application development as Smart Lights and Smart Plugs.

Depending on whether they are based on an operating system (OS), SDKs can be categorized into two types: Non-OS SDK and RTOS SDK.

1.3.1. **Non-OS SDK**

Non-OS SDK is not based on an operating system. It supports the compilation of IOT_Demo and AT commands. Non-OS SDK uses timers and callbacks as the main way to perform various functions such as nested events and functions triggered by certain conditions. Non-OS SDK uses the espconn network interface; users need to develop their software according to usage rules of the espconn interface.

1.3.2. **RTOS SDK**

RTOS SDK is based on FreeRTOS, open-source software development on Github.

- The FreeRTOS SDK is based on FreeRTOS, a multi-tasking OS. Users can use standard interfaces to realize resource management, recycling operations, execution delays, inter-task messaging and synchronization, and other task-oriented process design approaches. For the specifics of interface methods, please refer to the official website of FreeRTOS or USING THE FreeRTOS REAL TIME KERNEL—A Practical Guide

- The network operation interface in RTOS SDK is the standard lwIP API. RTOS SDK provides a package which enables a BSD Socket API interface. Users can directly use the socket API to develop software applications; and port to ESP8266 other applications from other platforms using the socket API, effectively reducing the learning costs arising from switching platforms.

- RTOS SDK introduces cJSON library whose functions make it easier to parse JSON packets.

- RTOS is compatible with non-OS SDK in Wi-Fi interfaces, SmartConfig interfaces, Sniffer related interfaces, system interfaces, timer interfaces, FOTA interfaces and peripheral driver interfaces, but does not support AT implementation.

1.4. **ESP8266 FW**

ESP8266 FW (Firmware) has been provided in binary format files (.BIN) that can be downloaded directly to the HDK. Users can choose between Over-The-Air (OTA) and non-OTA firmware. For detailed information, please refer to Table 1-1.
1. Overview

1.5. ESP8266 Toolkit

1.5.1. Compiler

Linux OS is required to compile the ESP8266 SDK. When using Windows OS, we recommend VirtualBox as the virtual machine for ESP8266. In order to simplify the compilation procedure, we have installed the compiling tools on the virtual machine. Users can directly compile the ESP8266 SDK by importing the ESP8266 compiler (OVA image) into the virtual machine.

1.5.2. Firmware Download Tool

The ESP8266 DOWNLOAD TOOL is the official firmware download tool developed by Espressif. Users can download multiple binaries to the SPI Flash of the ESP8266 motherboard (ESP-LAUNCHER or ESP-WROOM-02) at the same time according to the actual compilation mode and flash size.

1.5.3. Serial Port Debug Tool

The serial port debug tool can be used to directly communicate with the ESP8266 module over a standard RS-232 port. For PCs that do not have a physical serial port, a virtual com port (USB-to-serial converter) can be used.

---

Table 1-1. ESP8266 FW

<td>Main program compiled from SDK.</td>
<td>❌</td>
<td>✔️</td>
</tr>
</tbody>
</table>

📖 Notes:
- For the contents of SDK, please refer to Chapter 3, "Preparing the Software".
- For SDK compilation, please refer to Chapter 5, "Compiling the SDK".
- For the addresses of binaries in the flash, please refer to Chapter 4, "Flash Maps".
Users may directly input commands into the terminal and view or record responses in real time.

**Note:**

We recommend CoolTerm (for Windows and Mac OS) and Minicom (for Linux OS) as the serial port debug tool.
2. Preparing the Hardware

Depending on whether the ESP-LAUNCHER or the ESP-WROOM-02 is used, users will need either of the hardware mentioned in Table 2-1 below:

Table 2-1. Hardware Preparations

<table>
<thead>
<tr>
<th>ESP-LAUNCHER</th>
<th>ESP-WROOM-02</th>
</tr>
</thead>
<tbody>
<tr>
<td>• 1 × ESP-LAUNCHER</td>
<td>• 1 × ESP-WROOM-02</td>
</tr>
<tr>
<td>• 1 × USB cable</td>
<td>• 1 × USB-to-TTL converter (FT232R recommended)</td>
</tr>
<tr>
<td>OR</td>
<td>• 6 × Dupont lines</td>
</tr>
<tr>
<td>• 1 × ESP-WROOM-02</td>
<td>• 1 × soldering tool suite</td>
</tr>
<tr>
<td>OR</td>
<td></td>
</tr>
<tr>
<td>1 × PC with pre-installed Windows OS</td>
<td></td>
</tr>
</tbody>
</table>

⚠ Notice:
The ESP8266 Wi-Fi module needs a 3.3V power supply and may draw a minimum current of 500 mA.

2.1. ESP-LAUNCHER

1. Connect PC to the USB-UART interface of ESP-LAUNCHER using the USB cable.
2. Set ESP-LAUNCHER to download mode.

<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Slide Power Switch towards the outer side as the figure on the right shows.</td>
<td><img src="image" alt="Diagram of ESP-LAUNCHER" /></td>
</tr>
<tr>
<td>• Slide GPIO0 Control towards the inner side to enable ESP-LAUNCHER’s download mode.</td>
<td><img src="image" alt="Diagram of ESP-LAUNCHER" /></td>
</tr>
</tbody>
</table>

⚠ Notice:
J82 must be shorted by a jumper, otherwise code cannot be downloaded to the board.
3. Connect the USB-to-TTL converter to the PC.

**Note:**
Make sure that the proper driver for the USB-to-TTL converter is installed and recognized by the PC.

4. Power on ESP-LAUNCHER by sliding the Power Switch towards the inner side.
5. Power on the chip by sliding the Chip Switch towards the outer side.
6. Download firmware to flash with the ESP8266 DOWNLOAD TOOL.

**Note:**
On how to download firmware, please refer to Chapter 4, "Flash Map" and Chapter 6, "Downloading the Firmware".

7. After downloading, slide the GPIO0 Control towards the outer side to enable ESP-LAUNCHER's working mode.
8. Power on the chip again with the Chip Switch and the chip will read and run programs from the flash.

For more information on the ESP-LAUNCHER hardware, please refer to [ESP8266 System Description](#).

### 2.2. ESP-WROOM-02

1. Lead out the pins of the ESP-WROOM-02, as shown in Table 2-2.

**Table 2-2. ESP-WROOM-02 Pins**

<table>
<thead>
<tr>
<th>Pin</th>
<th>Pin status</th>

<tr>
<td>RXD</td>
<td>Receive-end in UART download</td>
<td></td>
</tr>
<tr>
<td>TXD</td>
<td>Transmit-end in UART download; floating/pull up</td>
<td></td>
</tr>
</tbody>
</table>
2. Connect ESP-WROOM-02 to the USB-to-TTL converter, using Dupont lines, as shown in Figure 2-1.

![Figure 2-1. ESP-WROOM-02 Download Mode](image)

3. Connect the USB-to-TTL converter to the PC.
4. Download firmware to flash with the ESP8266 DOWNLOAD TOOL.

**Note:**
On how to download firmware, please refer to Chapter 4, "Flash Maps" and Chapter 6, "Downloading the Firmware".

5. After downloading, switch ESP-WROOM-02 to working mode.
   - Set IO0 as floating or pull-up.
6. Power on ESP-LAUNCHER again and the chip will read and run programs from the flash.

**Notes:**
- IO0 is an internal pull-up pin.
- For more information on ESP-WROOM-02 hardware, please refer to [ESP8266 System Description](#) and [ESP-WROOM-02 Datasheet](#).
3. Preparing the Software

3.1. Non-OS SDK

Figure 3-1 shows the directory structure of the non-OS SDK.

![Non-OS SDK Directory Structure](image)

- **bin**: compiled binaries to be downloaded directly into the flash.
- **documents**: SDK-related documents or links.
- **driver_lib**: library files that drive peripherals, such as UART, I2C and GPIO.
- **examples**: sample codes for secondary development, for example, IoT Demo.
- **include**: header files pre-installed in SDK. The files contain relevant API functions and other macro definitions. Users do not need to modify them.
- **ld**: linker scripts. We suggest users not modifying them without any specific reasons.
- **lib**: library files provided in SDK.
- **tools**: tools needed for compiling binaries. Users do not need to modify them.

3.2. RTOS SDK

Users can download RTOS SDK and its application examples (ESP8266_IOT_PLATFORM) from:

- RTOS SDK
  https://github.com/espressif/ESP8266_RTOS_SDK
• **ESP8266_IOT_PLATFORM**
  
  [https://github.com/espressif/ESP8266_IOT_PLATFORM](https://github.com/espressif/ESP8266_IOT_PLATFORM)

Table 3-2 shows the directory structure of the RTOS SDK.

![RTOS SDK Directory Structure](image)

- **bin**: boot and initialization firmware.
- **documents**: ESP8266_RTOS_SDK files.
- **driver_lib**: sample codes of drivers.
- **examples**: sample codes for Espressif’s application programs.
  - **openssl_demo**: sample codes of the openssl API function.
  - **project_template**: sample codes of project templates.
  - **smart_config**: sample codes of SmartConfig.
  - **spiffs_test**: sample codes of the spiffs file system function.
  - **websocket_demo**: sample codes of web socket.
- **include**: header files of ESP8266_RTOS_SDK, including software interfaces and macro functions for users to use.
- **ld**: link files used when compiling; users do not need to modify them.
- **lib**: library file of ESP8266_RTOS_SDK.
- **third_party**: third-party library of Espressif’s open-source codes, currently including free RTOS, JSON, lwIP, mbedTLS, noPoll, OpenSSL, spiffs, and SSL.
- **tools**: tools needed for compiling binaries; users do not need to modify them.
3.3. ESP8266 Toolkit

3.3.1. Compiler

Please download VirtualBox from: https://www.virtualbox.org/wiki/Downloads.

Note: Please choose the right version of VirtualBox according to the host machine’s OS.

Please download the compiler ESP8266_lubuntu_20141021.ova from: http://downloads.espressif.com/FB/ESP8266_GCC.zip

<table>
<thead>
<tr>
<th>Steps</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Start Windows OS and install the virtual machine.</td>
<td><img src="image" alt="VirtualBox Screenshot" /></td>
</tr>
<tr>
<td>• Double-click VirtualBox-5.0.16-105871-Win.exe and install VirtualBox.</td>
<td>Note: VirtualBox has different versions. We are using Windows V.5.0.16 as an example.</td>
</tr>
<tr>
<td>• Double-click Oracle VM VirtualBox.exe to run the program, and the system will show the main menu 🎛.</td>
<td>Tip: The ESP8266 virtual machine takes up much space (memory). Please reserve enough space for it.</td>
</tr>
<tr>
<td>2. Import the image file.</td>
<td></td>
</tr>
</tbody>
</table>
3. Preparing the Software

<table>
<thead>
<tr>
<th>Steps</th>
<th>Results</th>
</tr>
</thead>
</table>
| • Select **File > Import Appliance**, and a dialog box will show up 👉.  
• Select the image file to import, for example, C:\ESP8266_lubuntu_20141021.ova, and click **Next**.  
• Click **Import** to confirm the settings. |

3. Create a shared folder.

<table>
<thead>
<tr>
<th>Steps</th>
<th>Results</th>
</tr>
</thead>
</table>
| • Create a new folder named **D:\VM\share**.  
• Select **Machine > Settings > Shared Folders...**, and a dialog box will show up 👉.  
• Select the shared folder in **Machine Folders**, for example, **D:\VM\share**. |

4. Run the virtual machine.
### 3. Preparing the Software

#### 3.3.2. Firmware Download Tool

Please download the ESP8266 DOWNLOAD TOOL from:

---

**Steps** | **Results**
---|---
*After importing, a virtual machine named **ESP8266_lubuntu** shows up.*

*Double-click **ESP8266_lubuntu** or **Start** to run the virtual machine.*

*The system shows the ESP8266 virtual machine.*

*If a dialog box like the one below shows up, please enter the password: **espressif.***
This chapter provides the flash maps for OTA firmware and non-OTA firmware in flash memories with a different capacity. Users can modify the map as needed.

Figure 4-1 shows the flash maps for the two different types of firmware.

**Note:**
For ESP8266 firmware, please refer to Section 1.3, "ESP8266 FW".

- **System Program**: this area stores the firmware necessary for the system to run.
- **User Data**: If system data do not take up all the flash memory, the remaining area can be used to store user data.
- **User Param**: Users can define the address. In IOT_Demo, the four sectors starting from 0x3C000 are defined as the user parameter area. Users can define any available address for this area.
- **master_device_key.bin**: In IOT_Demo, it is located in the third sector of user parameter area.

- **System Param**: this area contains the last four sectors of the flash.
  - **blank.bin**: the download address is the second-to-last sector in the flash.
  - **esp_init_data_default.bin**: the download address is the fourth-to-last sector of flash.

- **Boot Data**: It is located in Partition 1 of OTA firmware, and stores OTA-related data.

- **Reserved**: It is a reserved area in Partition 2 of OTA firmware, corresponding to the **Boot data** area in Partition 1 of OTA firmware.

**Notes:**
- Each sector of the flash is 4 KB.
- For detailed download addresses, please refer to the following sections..

4.1. Non-OTA

4.1.1. Flash Map

For flash memories with different capacity levels, the storage space of **eagle.irom0text.bin** is limited. Users can change the limit by modifying `ESP8266 NONOS_SDK/ld/eagle.app.v6.ld`.

Users can modify the `len` field in `irom0_0_seg`, as shown in Figure 4-2 (red rectangle).

The location of **irom0.text** varies across different versions of SDK. Users must consult the `eagle.app.v6.ld` file and ensure that they are downloading **eagle.irom0.text.bin** to the correct offset in the flash. The address in the blue rectangle marks the location of **eagle.irom0.text.bin** in the flash.

![Figure 4-2. Location for irom0.text](image)

Table 4-1 shows the storage limits of **eagle.irom0text.bin** with different `len` values.

<table>
<thead>
<tr>
<th>Flash capacity</th>
<th>eagle.flash.bin</th>
<th>eagle.irom0text.bin</th>
<th>User data</th>
<th>len</th>
<th>User/System Param</th>
</tr>
</thead>
<tbody>

<td>≤ 64</td>
<td>≤ 240</td>
<td>≥ 176</td>
<td>0x3C000</td>
<td>16</td>
</tr>
<tr>
<td>1024</td>
<td>≤ 64</td>
<td>≤ 752</td>
<td>≥ 176</td>
<td>0xBC000</td>
<td>16</td>
</tr>
</tbody>
</table>
4. Flash Maps

4.1. Download Addresses

Table 4-2 lists the download addresses for non-OTA firmware.

<table>
<thead>
<tr>
<th>Flash capacity</th>
<th>eagle.flash.bin</th>
<th>eagle.irom0text.bin</th>
<th>User data</th>
<th>Len</th>
<th>User/System Param</th>
</tr>
</thead>
<tbody>
<tr>
<td>512</td>
<td>≤ 64</td>
<td>≤ 768</td>
<td>≥ 176</td>
<td>0xC0000</td>
<td>16</td>
</tr>
<tr>
<td>1024</td>
<td>≤ 64</td>
<td>≤ 768</td>
<td>≥ 176</td>
<td>0xC0000</td>
<td>16</td>
</tr>
<tr>
<td>2048</td>
<td>≤ 64</td>
<td>≤ 768</td>
<td>≥ 176</td>
<td>0xC0000</td>
<td>16</td>
</tr>
<tr>
<td>4096</td>
<td>≤ 64</td>
<td>≤ 768</td>
<td>≥ 176</td>
<td>0xC0000</td>
<td>16</td>
</tr>
<tr>
<td>8192</td>
<td>≤ 64</td>
<td>≤ 768</td>
<td>≥ 176</td>
<td>0xC0000</td>
<td>16</td>
</tr>
<tr>
<td>16*1024</td>
<td>≤ 64</td>
<td>≤ 768</td>
<td>≥ 176</td>
<td>0xC0000</td>
<td>16</td>
</tr>
</tbody>
</table>

Note: ESP8266 presently only supports a System Param area of up to 1024 KB.

### 4.1.2. Download Addresses

Table 4-2 lists the download addresses for non-OTA firmware.

Table 4-2. Download Address for Non-OTA Firmware (unit: KB)

<table>
<thead>
<tr>
<th>Binaries</th>
<th>Download addresses in flash with different capacities</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>512</td>
</tr>
<tr>
<td><code>master_device_key.bin</code></td>

<tr>
<td><code>esp_init_data_default.bin</code></td>
<td>0x7C000</td>
</tr>
<tr>
<td><code>blank.bin</code></td>
<td>0x7E000</td>
</tr>
<tr>
<td><code>eagle.flash.bin</code></td>
<td></td>
</tr>
<tr>
<td><code>eagle.irom0text.bin</code></td>
<td></td>
</tr>
</tbody>
</table>

Notes:

- In general, [ESP Flash Download Tool](#) can be used to download firmware into flash.
- But for 8 MB or 16 MB flash, please use [esptool](#) instead.

4.2. OTA Firmware

4.2.1. Flash Map

Table 4-3 lists the download addresses for the OTA firmware.

Table 4-3. OTA Flash Map (unit: KB)

<table>
<thead>

<td>≤ 236</td>
<td>16</td>
<td>≥ 0</td>
</tr>
<tr>
<td>1024</td>
<td>4</td>
<td>≤ 492</td>
<td>≤ 492</td>
<td>16</td>
<td>≥ 0</td>
</tr>
</tbody>
</table>
### 4.2.2. Download Addresses

Table 4-4 lists the download addresses for the OTA firmware.

<table>
<thead>
<tr>
<th>Flash capacity</th>
<th>boot</th>
<th>user1.bin</th>
<th>user2.bin</th>
<th>User/System Param</th>
<th>User data</th>
</tr>
</thead>
<tbody>
<tr>
<td>2048 (Partition 1 = 512)</td>
<td>4</td>
<td>≤ 492</td>
<td>≤ 492</td>
<td>16</td>
<td>≥ 1024</td>
</tr>
<tr>
<td>2048 (Partition 1 = 1024)</td>
<td>4</td>
<td>≤ 1004</td>
<td>≤ 1004</td>
<td>16</td>
<td>≥ 0</td>
</tr>
<tr>
<td>4096 (Partition 1 = 512)</td>
<td>4</td>
<td>≤ 492</td>
<td>≤ 492</td>
<td>16</td>
<td>≥ 3072</td>
</tr>
<tr>
<td>4096 (Partition 1 = 1024)</td>
<td>4</td>
<td>≤ 1004</td>
<td>≤ 1004</td>
<td>16</td>
<td>≥ 2048</td>
</tr>
<tr>
<td>8192 (Partition 1 = 1024)</td>
<td>4</td>
<td>≤ 1004</td>
<td>≤ 1004</td>
<td>16</td>
<td>≥ 6144</td>
</tr>
<tr>
<td>16384 (Partition 1 = 1024)</td>
<td>4</td>
<td>≤ 1004</td>
<td>≤ 1004</td>
<td>16</td>
<td>≥ 14336</td>
</tr>
</tbody>
</table>

### Notes:
- In general, **ESP Flash Download Tool** can be used to download firmware into flash.
- But for 8 MB or 16 MB flash, please use **esptool** instead.
- For OTA firmware, users do not need to download **user2.bin**, but upgrade the firmware via the cloud server.
- For details on the functional description of OTA firmware, please refer to **ESP8266 FOTA Guide**.
5. Compiling the SDK

5.1. Preparations

5.1.1. Modifying SDK Files

Notes:
- This chapter demonstrates how to compile the SDK by taking `ESP8266_NONOS_SDK/examples/IoT_Demo` as an example.
- `IoT_Demo` defines three types of devices, i.e., LIGHTDEVICE, PLUGDEVICE and SENSORDEVICE in `examples/IoT_Demo/include/user_config.h`. Users can only configure one device at a time. The default device for configuration is LIGHTDEVICE.

Table 5-1 lists the modified values.

<table>
<thead>
<tr>
<th>Default value (512)</th>
<th>512</th>
<th>1024</th>
<th>2048</th>
<th>2048</th>
<th>4096</th>
<th>4096</th>
<th>8192</th>
<th>16384</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0x3C</td>
<td>0x7C</td>
<td>0x7C</td>
<td>0xFC</td>
<td>0x7C</td>
<td>0xFC</td>
<td>0xFC</td>
<td>0xFC</td>
</tr>
<tr>
<td></td>
<td>0x3D</td>
<td>0x7D</td>
<td>0x7D</td>
<td>0xFD</td>
<td>0x7D</td>
<td>0xFD</td>
<td>0xFD</td>
<td>0xFD</td>
</tr>
</tbody>
</table>

Note:
Users need to modify the SDK files if using the OTA firmware.

1. Start Windows OS.
2. Modify files in `ESP8266_NONOS_SDK/examples/IoT_Demo/include` according to the flash map.
   - Modify `#define PRIV_PARAM_START_SEC` in `user_light.h` and `user_plug.h`.

```c
/* NOTICE !!! ---this is for 512KB spi flash. */
/* You can change to other sector if you use other size spi flash. */
/* Refer to the documentation about OTA support and flash mapping*/
#define PRIV_PARAM_START_SEC 0x3C
#define PRIV_PARAM_SAVE 0
```

- Modify `#define ESP_PARAM_START_SEC` in `user_esp_platform.h`.

```c
/* NOTICE---this is for 512KB spi flash. */
/* you can change to other sector if you use other size spi flash. */
#define ESP_PARAM_START_SEC 0x3D
```
5. Compiling the SDK

5.1.2. Downloading SDK Files

1. Start Linux OS.
2. Run LXTerminal on the desktop of the virtual machine.
3. Copy the files to be compiled to the shared folder.

<table>
<thead>
<tr>
<th>Steps</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Copy ESP8266_NONOS_SDK folder to the</td>
<td>![Image]</td>
</tr>
<tr>
<td>shared directory, for example, C:\VM\share.</td>
<td></td>
</tr>
<tr>
<td>• Copy IoT_Demo folder to C:\VM\share\ESP8266_NONOS_SDK, as shown in the figure on the right 📐.</td>
<td>![Image]</td>
</tr>
</tbody>
</table>

4. Download shared directory.

<table>
<thead>
<tr>
<th>Steps</th>
<th>Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Execute ./mount.sh.</td>
<td>![Image]</td>
</tr>
<tr>
<td>• Input the password: expressif. Downloading shared files is completed.</td>
<td>![Image]</td>
</tr>
<tr>
<td>• Open the shared directory ESP8266_NONOS_SDK in the virtual machine and confirm whether the download has been successful.</td>
<td>![Image]</td>
</tr>
<tr>
<td>- If successful, the directory contains such files as those in the figure on the right 📐.</td>
<td>![Image]</td>
</tr>
<tr>
<td>- If not, the directory will be empty, and users will need to go over this step again.</td>
<td>![Image]</td>
</tr>
</tbody>
</table>

⚠️ Notice:
If users use the RTOS SDK, please continue with the following steps; if use the non-OS SDK, please skip Step 5.

5. Set the variable PATH to point to SDK and binaries.

```bash
export SDK_PATH=~/Share/ESP8266_RTOS_SDK
export BIN_PATH=~/Share/ESP8266_RTOS_SDK/bin
```
5. Compiling the SDK

5.2. Compilation

5.2.1. Compile ESP8266_NONOS_SDK_v0.9.5 and Later Versions

1. Switch to the `/Share/ESP8266_NONOS_SDK/IoT_Demo` directory in the terminal.

```bash
cd /home/esp8266/Share/ESP8266_NONOS_SDK/IoT_Demo
./gen_misc.sh
```

The system shows the following information:

<table>
<thead>
<tr>
<th>gen_misc.sh version 20150511</th>
</tr>
</thead>
</table>

Please follow below steps(1-5) to generate specific bin(s):  

2. Select the required options as shown in Figure 5-1.

![Figure 5-1. Compile SDK](image_url)

- **FOTA?**
  - N

- **New version?**
  - N

- **First-time usage?**
  - Y

- **Choose boot version**
  - 0=boot_v1.1, 1=boot_v1.2+, 2=none
  - Enter (0/1/2, default 2)

- **Choose bin generate**
  - 0=eagle.flash.bin+eagle.irom0text.bin, 1=user1.bin, 2=user2.bin
  - Enter (0/1/2, default 0)

- **New version?**
  - Y

- **Choose spi speed**
  - 0=20MHz, 1=26.7MHz, 2=40MHz, 3=80MHz
  - Enter (0/1/2/3, default 2)

- **Choose spi mode**
  - 0=QIO, 1=QOUT, 2=DIO, 3=DOUT
  - Enter (0/1/2/3, default 0)

- **Choose spi size and map**
  - 0=512KB(256KB+256KB)
  - Enter (0/2/3/4/5/6, default 0)

**Example Option**
3. After compilation, the generated binaries and the addresses in flash are shown as follows:

Generate user1.2048.new.3.bin successfully in folder bin/upgrade.
boot.bin--------->0x00000
user1.2048.new.3.bin-->0xSupport boot_v1.2 and +
01000
!!!

5.2.2. ESP8266_NONOS_SDK_v0.9.4 and Earlier Versions

For ESP8266_NONOS_SDK_v0.9.4 and previous versions, the compilation process is as follows:

1. Execute ./gen_misc_plus.sh 1 to generate user1.bin under the /ESP8266_NONOS_SDK/bin/upgrade path.
2. Execute make clean to clear previous compilation data.
3. Execute ./gen_misc_plus.sh 2 to generate user2.bin under the /ESP8266_NONOS_SDK/bin/upgrade path.

Note:
ESP8266_NONOS_SDK_v0.7 and earlier are non-OTA firmware.
6. Downloading the Firmware

6.1. Download Procedure

1. Start Windows OS.
2. Double-click **ESP_DOWNLOAD_TOOL.exe** to open Flash tool.

![ESP8266 DOWNLOAD TOOL—SPI Download](image)

**Figure 6-1. ESP8266 DOWNLOAD TOOL—SPI Download**

<table>
<thead>
<tr>
<th>SPIDownload</th>
<th>For SPI Flash download.</th>

<td>For HSPI Flash download.</td>
</tr>
<tr>
<td>RFCfg</td>
<td>RF initialization Configuration.</td>
</tr>
<tr>
<td>MutiDownload</td>
<td>For multi-mother boards download.</td>
</tr>
</tbody>
</table>
3. Double-click ![Download Path Config](image) panel to select the binaries to be downloaded. Set the corresponding download addresses in ADDR.

4. Configure SPIDownload.

**Note:**
The binaries to be downloaded and the corresponding addresses vary with different SPI Flash sizes and actual demands. For details, please refer to Chapter 4, “Flash Maps”.

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>START</td>
</tr>
<tr>
<td>STOP</td>
</tr>
<tr>
<td>MAC Address</td>
</tr>
<tr>
<td>COM PORT</td>
</tr>
</tbody>
</table>
5. After downloading, turn GPIO0 Control on ESP-LAUNCHER to the outer side and power the board on to enable the working mode.

6. Check Log File

After downloading firmware, users can check the log printed in the terminal by using the serial port debug tool.

Users need to configure the settings of the serial port debug tool, as follows:

Table 6-2. Serial Port Debug Tool Configuration

<table>
<thead>
<tr>
<th>Items</th>
<th>Configuration Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Protocol</td>
<td>Serial port.</td>
</tr>
<tr>
<td>Port number</td>
<td>Set the port number according to the connected device.</td>
</tr>
</tbody>
</table>

**Baud rate**

- The baud rate at which the device is running, related to the crystal oscillator.
  - 69120 (24 M crystal oscillator)
  - 74880 (26 M crystal oscillator)
  - 115200 (40 M crystal oscillator)

The ESP8266 AT example supports the baud rate of 115200 by default. Users cannot modify it.

The ESP8266 IOT Demo example supports the baud rate of 74880. Users can modify it.

<table>
<thead>
<tr>

</tr>
<tr>
<td>Calibration</td>
<td>None.</td>
</tr>
<tr>
<td>Flow control</td>
<td>None.</td>
</tr>
</tbody>
</table>

6.2.1. ESP8266 IOT Demo

If users download ESP8266 IOT Demo firmware, the system in working mode will show the initialization information including the SDK version, etc. “Finish” means the firmware works properly.

```
SDK version: X.X.X(e67da894)
IOT VERSION = v1.0.5t45772(a)
reset reason: 0
PWM version: 00000003
```
6.2.2. ESP8266 AT

If users download the ESP8266 AT firmware, or the default firmware in ESP-LAUNCHER or ESP-WROOM-02, the system in working mode will display “Ready” at the end. Input command “AT” in the terminal and the system will return “OK”, which means that the firmware works properly.

**Notes:**

- The baud rate in AT firmware is configured as 115200 manually, however, the default baud rate of ESP8266 is 74880, due to this discrepancy, the system initialization information will be displayed as mojibake. It is a normal phenomenon as long as the system shows “Ready” at the end.
- For more information on AT commands, please refer to [ESP8266 AT Instruction Set](#).

6.3. Configuration of RF initialization (Optional)

Before downloading binaries to flash, users can modify the RF initialization settings in the RF InitConfig tab. The newly-generated `esp_init_data_setting.bin` can be downloaded to the flash instead of `esp_init_data_default.bin`. Users can configure both the options and the parameters of the RF settings.
6. Downloading the Firmware

6.3.1. Configuration of RF InitConfig Options

RF InitConfig options are listed in the upper part of Figure 6-2. Please refer to Table 6-3 for a description of this configuration.

### Table 6-3. Configuration of RF InitConfig Options

<table>
<thead>
<tr>
<th>Items</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TxTargetPowerConfig</td>
<td>Users need not configure this. It varies with the options in LowPowerMode.</td>
</tr>
<tr>
<td>LowPowerMode</td>
<td>Configure the low power mode as required.</td>
</tr>
<tr>
<td></td>
<td>• LowPowerEn: enable low power mode, set a power value for all data rates.</td>
</tr>
<tr>
<td></td>
<td>• PowerLimitEn: set a limit for output power.</td>
</tr>
<tr>
<td></td>
<td>• BackOffEn: set backoff value for each data rate.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Users cannot configure LowPowerEn and PowerLimitEn at the same time.</td>
</tr>
<tr>
<td>CrystalFreq</td>
<td>Select the crystal oscillator frequency according to the crystal oscillator used.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> If a different option is selected when downloading, it will override this configuration.</td>
</tr>
</tbody>
</table>
6.3.2. Configuration of RF InitConfig Parameters

RF InitConfig parameters are listed in the lower part of Figure 6-2. The description of parameters’ configuration is shown in Table 6-4.

<table>
<thead>
<tr>
<th>Items</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>The byte in <code>esp_init_data_setting.bin</code> (0 ~ 127 byte). For example, A = 0 represents Byte 0 in <code>esp_init_data_setting.bin</code>.</td>
</tr>
<tr>
<td>B</td>
<td>The item name. Users cannot modify it if marked as Reserved.</td>
</tr>
<tr>
<td>C</td>
<td>The item name. Users cannot modify it if marked as Reserved.</td>
</tr>
<tr>
<td>D</td>
<td>Data types of configuration items, including unsigned and signed data types.</td>
</tr>
<tr>
<td>E</td>
<td>The hexadecimal value of a configuration item.</td>
</tr>
</tbody>
</table>

⚠ **Notice:**

Please do not modify the parameters marked as Reserved.
The following section introduces how to modify the 112 ~ 114 byte parameters. Figure 6-3 shows the initial configuration.

Modify the RF Initialization Parameters

Byte 114 is used to control THE RF initialization when ESP8266 is powered on. Table 6-5 provides the parameter configuration.

\[
\begin{array}{|c|c|c|c|c|c|}
\hline
A & B & C & D & E & F \\
\hline
112 & tx\_param42 & freq\_correct\_en & unsigned & 0 & bit[0]:0->do not correct freq \\
113 & tx\_param43 & force\_freq\_offset & unsigned & 0 & signed, unit is 8\text{kHz} \\
114 & tx\_param44 & rf\_cal\_use\_flash & unsigned & 0 & 0: RF init no RF CAL, using \\
\hline
\end{array}
\]

Figure 6-3. 112 ~ 114 Byte Parameters

Correct Frequency Offset

Byte 112 and byte 113 relate to the frequency offset correction. Table 6-6 provides the parameter configuration.

\[
\begin{array}{|c|c|}
\hline
Option & Description \\
\hline
byte 114 = 0 & Only a VDD33 calibration is performed during the RF initialization. It takes about 2 ms and the least initial current. \\
byte 114 = 1 & The default value is 1. VDD33 and TX power calibrations are performed during the RF initialization. It takes about 18 ms and small initial current. \\
byte 114 = 2 & The same as when “byte 114 = 0”. \\
byte 114 = 3 & All calibrations are performed during the RF initialization. It takes about 200 ms and large initial current. \\
\hline
\end{array}
\]

Note:

Supported by ESP8266_NONOS_SDK_V1.4.0 and ESP8266_RTOS_SDK_V1.3.0 and higher.

\[
\begin{array}{|c|c|}
\hline
Option & Description \\
\hline
bit 0 & This bit is of the highest priority. \\
& • bit 0 = 0: frequency offset cannot be corrected. \\
& • bit 0 = 1: frequency offset can be corrected. \\
\hline
\end{array}
\]

Note:

Supported by ESP8266_NONOS_SDK_V1.5.3 and ESP8266_RTOS_SDK_V1.3.0 and higher.
6.3.3. Configuration Examples

The configuration of bytes 112 and 113 depends on users’ specific needs. We provide some examples below:

1. **The module works at ambient temperature, and needs no correction of the frequency offset.**
   - Set byte 112 = 0, byte 113 = 0.

2. **The module works at ambient temperature and needs no automatic tracking and correction of the frequency offset; yet the frequency offset is large.** In this case, a manual correction of the frequency offset is recommended.
   - If the frequency offset is +160 KHz (at ambient temperature), users can set byte 112 = 0x07, byte 113 = (256 - 160/8) = 236 = 0xEC.
   - If the frequency offset is -160 KHz (at ambient temperature), users can set byte 112 = 0x05, byte 113 = 160/8 = 20 = 0x14. This may effect the digital peripheral performance, so we do not recommend it.

3. **Applications, such as smart lights, work at a wide temperature range of -40 °C to 125 °C, and need to track and correct the frequency offset automatically.** The frequency offset at ambient temperature is small, so the initial offset correction value is not needed.
   - Set byte 112 = 0x03, byte 113 = 0.
4. Applications, such as smart lights, work at a wide temperature range of -40 °C to 125 °C, and need to track and correct the frequency offset automatically. The frequency offset at ambient temperature is large, so the initial offset correction value is needed.

- If the frequency offset is +160 kHz (at ambient temperature), users can set byte 112 = 0x0B, byte 113 = (256 - 160/8) = 236 = 0xEC.
- If the frequency offset is -160 kHz (at ambient temperature), users can set byte 112 = 0x09, byte 113 = 160/8 = 20 = 0x14. But this may effect the digital peripheral performance and needs substantive tests, so we do not recommend it.

We recommend Example 3.

When the configuration of RF initialization is done, click **GenInitBin** button to generate **esp_init_data_setting.bin**.

In addition, users can click **Default** button to set the value of frequency offset to default, or click **LoadInitBin** button to import a binary file for configuration.
A. Appendix—Configuring ISSI & MXIC Flash QIO Mode

⚠ **Notice:**
Choose DIO or DOUT mode when downloading, otherwise errors may occur. There is no need to modify binaries in DIO or DOUT mode.

When using QIO mode of ISSI flash or MXIC flash, users need to modify the first two bytes in `blank.bin`, as shown in Table A-1. During initialization, ESP8266 will automatically check the first two bytes and switch to QIO mode to read ISSI_FLASH or MXIC_FLASH. The structure of `blank.bin` is shown below:

```c
struct boot_hdr{
    char user_bin:2;    // low_bit
    char boot_status:1;
    char to_qio:1;
    char reverse:4;
    char version:5;     // low bit
    char test_pass_flag:1;
    char test_start_flag:1;
    char enhance_boot_flag:1;
};
```

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Without secondary boot loader</td>
<td>Modify <code>to_qio</code> to 0.</td>
</tr>
</tbody>
</table>
| With secondary boot loader    | Modify `user_bin` to 0 and `to_qio` to 0, as well. Modify version according to the current boot version. **Example:** If users use the secondary `boot_v1.5.bin`, please modify the first two bytes FF FF to F4 E5.

Example:

If users use the secondary `boot_v1.5.bin`, please modify the first two bytes FF FF to F4 E5.
B. Appendix—Learning Resources

B.1. Must-Read Documents

- **ESP8266EX Datasheet**
  Description: This document introduces the specifications of ESP8266EX, including an overview of the features, protocols, technical parameters and applications. It also describes the pin layout, as well as major functional modules integrated in ESP8266EX (CPU, flash and memory, clock, radio, Wi-Fi, and low-power management). Additionally, it provides descriptions of peripheral interfaces integrated on ESP8266EX, lists the electrical data of ESP8266EX and illustrates the package details of ESP8266EX.

- **ESP8266 Hardware Resources**
  Description: This zip package includes the manufacturing specifications of the ESP8266 board and its modules, manufacturing BOM and schematics.

- **ESP8266 Non-OS SDK IoT Demo Guide**
  Description: This document provides simple demo implementations of three types of smart devices: Smart Light, Smart Power Plug, and Sensor Device. It also introduces the readers to curl toolkits, functions in LAN and WAN.

- **ESP8266 RTOS SDK Programming Guide**
  Description: This document provides sample codes based on ESP8266_RTOS_SDK, including basic examples, networking protocol examples and advanced examples.

- **ESP8266 AT Command Examples**
  Description: This document introduces some specific examples of how to use Espressif AT commands, including single connection as a TCP client, UDP transmission and transparent transmission, and multiple connection as a TCP server.

- **ESP8266 AT Instruction Set**
  Description: This document provides lists of AT commands based on ESP8266_NONOS_SDK, including user-defined AT commands, basic AT commands, Wi-Fi AT commands and TCP/IP-related AT commands. It also introduces the downloading of AT firmware into flash.

- **ESP8266 Non-OS SDK API Reference**
  Description: This document lists ESP8266_NONOS_SDK APIs, provides an overview of ESP8266_NONOS_SDK and introduces the readers to system APIs, TCP/UDP APIs, mesh APIs, application specific APIs, definitions and data structures, and APIs for peripheral interfacing.

- **ESP8266 RTOS SDK API Reference**
Description: This document lists ESP8266_RTOS_SDK APIs, including functions for Wi-Fi related APIs, boot APIs, etc.

- **FAQ**

### B.2. Must-Have Resources

- **ESP8266 SDKs**
  Description: This webpage provides links to the latest version of ESP8266 SDK and the older ones.

- **RTOS Sample Code**
  Description: This webpage provides the sample code for the commonly used functions.

- **Non-OS Sample Code**
  Description: This webpage provides the sample code for the commonly used functions.

- **ESP8266 Tools**
  Description: This webpage provides links to the ESP8266 flash download tools and ESP8266 performance evaluation tools.

- **ESP8266 APK**
- **ESP8266 Certification and Test Guide**
- **ESP8266 BBS**
- **ESP8266 Resources**
